GREENLANGTON

Stop losing time to busy work.

There is a better way.

SCROLL

WHAT IS STEALING YOUR TIME?

Every business develops work that takes longer than it should.

01 A report that takes hours to prepare.

02 Information that has to be entered twice.

03 A spreadsheet somebody has to rebuild every week.

04 Systems that almost work together — but don’t.

05 A process that depends on one person knowing how to do it.

06 A task everyone hates doing, but nobody has had the time to fix.

These are not examples of businesses doing things incorrectly. They are natural operational problems that develop as companies grow and change.

Sometimes you need another set of eyes.

GreenLangton looks at the work consuming your team's time, understands why it happens, and finds a practical way to make it better.

We don't arrive with a predetermined answer.

We start with the problem.

HOW WE WORK

A straightforward progression.

01 Show us the pain.

What takes too long? What keeps coming back? What is your team tired of doing?

02 Understand it.

We look at the process, the systems involved and the people who actually do the work.

03 Measure it.

If something consumes time every week or every month, that time has a cost. Understanding that cost helps determine whether solving the problem makes business sense.

---

04 Find a better way.

The answer depends on the problem. It might involve changing a workflow. Connecting existing systems. Improving reporting. Building a tool. Automating part of a process. Using AI. Or doing something much simpler.

The tool isn’t the product. The better outcome is.

---

05 Keep it working.

Where appropriate, GreenLangton can continue supporting and maintaining the solution rather than simply delivering it and walking away.

PROOF

The same pattern, twice.

RETAIL PRICING

> **20 min**
> down from a full-time role

THE PAIN

A large South African hardware retailer effectively required a full-time employee to manage complex pricing across its inventory. Different products, margins, customer categories and commercial rules created significant complexity and opportunities for error.

THE BETTER WAY

A dynamic pricing solution was developed within the company’s existing ERP environment. Business rules, margin protections, exceptions, validation and variance reporting were incorporated into the process.

THE RESULT

A pricing process that had effectively consumed a full-time role could be completed across the business in approximately 20 minutes, with greater consistency and control.

TECHNOLOGY DEPLOYMENT

> 16
> machines prepared at once

THE PAIN

A global consumer-goods company experienced long-running help-desk tickets because preparing replacement computers was slow, inconsistent and technician-intensive. The backlog also affected the team’s ability to demonstrate service efficiency to international management.

THE BETTER WAY

Using infrastructure and equipment already available to the business, a standardized deployment environment was created that could prepare up to 16 machines simultaneously.

THE RESULT

Technician involvement was dramatically reduced, deployment became more consistent, machines could be prepared in a fraction of the previous time, and the help desk could focus its resources on other problems.

AN IMPORTANT DISTINCTION

We don’t replace good systems just because we can.

Your existing accounting platform may work perfectly well.

Your ERP may already do 95% of what you need.

Your spreadsheets may contain years of valuable knowledge.

Your employees may already have developed an effective process.

Sometimes the problem is simply the remaining 5%.

We find the part that’s stealing your time and work from there.

COMMERCIAL APPROACH

One problem. Two ways forward.

Build it.

A defined implementation with a defined scope. Once completed and delivered, additional work or support can be provided as required.

Stay with it.

Where appropriate, the solution can instead be delivered through an ongoing service agreement. This can include implementation, support, maintenance and an agreed level of ongoing adjustment.

The objective is not to force every customer into a subscription. The objective is to structure the solution in the way that makes the most sense for the customer and the problem.

WHAT'S STEALING YOUR TIME?

Tell us about the task, process or workaround that's taking longer than it should.

We'll start there.

Name *

Company (optional)

Email *

Phone (optional)

What's taking your time? *

A short description is completely fine.

e.g. Someone rebuilds the same pricing report by hand every week.

The details you submit are used only to respond to your message.
